EASY WETTA COIR POTTING MIX BLOCK

Introduction

- **JUST ADD WATER** – Easy Wetta Potting Mix Block expands up to 60 litres of *PREMIUM GRADE COIR POTTING MIX* in around 10 minutes.
- **Ideal Tub and Terracotta Mix**, great for all Pots and Hanging Baskets. **Guaranteed to improve your plants growth**
- **Increases water-holding capacity and reduces watering frequency.**
- **Contains Slow Release Fertiliser for extra LIFT-OFF**
- **Light an easy to handle. Only 4kg makes up to 60L**

VS - 2 LARGE BAGS OF 30 LITRE POTTING MIX = APPROX 50KG

SIZES – AVAILABLE IN 15L & 60L SIZES

Expanding Easy Wetta Potting Mix

Place the **EASY WETTA POTTING MIX COIR BLOCK** into a wheelbarrow, slowly add around 30 litres of water for the 60L Block. (7 Litres of water for the 15L Block). Allow to soak for a full 10 minutes. Pull apart and churn with your hands, ensuring that the entire mix is thoroughly wet and hydrated. Drain off excess water into the garden bed.

For Best Results

When should I re-pot my plants?

Most plants require re-potting at regular intervals, into larger pots/containers. A good indication that your plant needs re-potting is when its roots are coming through the drainage holes. Ideal times for re-potting are Spring, Summer and early Autumn.

How do I re-pot for best results?

Water the plant in its old pot and allow to drain.

Select a pot that is 25-50mm wider than the old pot. Cover drainage holes with stones or pebbles and partly fill with potting mix. Loosen plants root system. Position plant in centre of new pot. Fill around the edges of the root ball with coir-potting mix to within 20mm of the top of the pot and firm down gently.

Thoroughly water re-potted plants, ensure the coir-potting mixture is uniformly moist and allow to drain. Thereafter water whenever the surface of the potting mixture feels dry to touch.

To maintain vigorous growth and to promote strong root development, plants need to be fed regularly with balanced fertilisers.
