

ADDING NEW MAXIMA LIGHTS TO AN EXISTING LINKED NETWORK

For Maxima+ model only

FIND THE ORIGINAL MASTER LIGHT.

HINT: It should have been set to “M” when you first installed it.

If you cant find the original Master light don't worry. Go to **ADDING A NEW LIGHT(S) TO THE EXISTING LINKED NETWORK (but you cant find the Original Master Light)**

2. Turn the switch to **OFF** on the Master light.
3. Then turn the Master light switch back to **M**. This gets it ready to accept a new light to the network.
4. Take the first additional Secondary light and switch to **S** position (far right).
5. Press the **LINK** button on both units simultaneously until the lights begin to flash. The lights will now start pairing mode. Once the light on the Secondary unit stops flashing and becomes a steady white light the pairing of the 2 lights has been successful. The Master unit will still be slowly flashing.
6. Turn the Secondary Light to **OFF** position.
7. Now turn the next secondary light to “**S**” position. Then press the **LINK** button on this light only and hold until the light stops flashing and becomes a steady white light. Turn to **OFF** position. Repeat this step until no more Secondary Lights.

All added Secondary Lights should now be in the **OFF** position.

8. While it is still slowly flashing turn the Master switch to **OFF**.
9. Then set Light Settings to “**S**” position for Secondary Light and “**M**” position for Master Light.

IMPORTANT - IDENTIFY YOUR MASTER LIGHT SO IT CAN BE EASILY LOCATED IN THE FUTURE. It will be needed when adding new Radar 360° lights to the network in the future. Switch should be set to “**M**” (for Master) position. We also suggest also tying something bright or easy to see to the neck between the panel & light.

When the linking process is completed, the Radar 360° Linkable lights create a new chain of lights which includes the old lights and the new lights.

10. If the link is not working as expected, simply reset your lights to factory setting by following the “**Unlinking your Radar 360 Light**” Instructions and then start again.
